

SHENYANG OFFICE PROJECT

Location	: Shen Yang
Project Date	: 2023
GFA	: 73,011 sqm
Client	: Confidential
Role	: Interior Designer

Project Description:

Shenyang, recognized as the National Forest City, beautifully melds historical architecture with lush greenery, providing a stunning setting for our latest project. This mixed-use development, comprising both a hotel and office spaces, is designed to harmoniously integrate nature with architectural innovation. It exemplifies a unique balance between green environments and structural design, fostering a captivating and inspiring atmosphere.

Our interior design concept seamlessly merges nature and architecture, drawing inspiration from Shenyang's rich heritage. We have incorporated elements that evoke the essence of a bamboo forest, creating an engaging contrast of "heavy and light" that is reflected in our striking ceiling design. This approach enriches the spatial experience and enhances overall ambiance.

Prioritizing user comfort and inclusivity, our design emphasizes ergonomic solutions and intuitive navigation throughout the space. We have integrated biophilic elements and sustainable practices, ensuring a blend of greenery and eco-friendly materials. Smart technology solutions further elevate the user experience and improve operational efficiency.

Ultimately, our holistic design philosophy aims to redefine contemporary living. By fostering a sense of harmony, well-being, and sustainability, this project strives to create an environment that not only meets functional needs but also inspires and uplifts its occupants, making a significant contribution to the thriving urban landscape of Shenyang.
